

CESSNA MUSTANG

Aircraft Specifications

Running with state-of-the-art Pratt & Whitney PW615F engines, rated at 1,350 pounds of thrust each, the new Mustang is a breakthrough combination of power, speed and true jet value. It can cruise at speeds up to 340 knots, climb easily over weather up to 41,000 feet, and fly nonstop over half a continent with a good thousand miles of IFR range. The passenger cabin is equally advanced. With its six large oval windows and club seating arrangement, the space feels as wide-open as the aircraft itself. It's an automotive-styled interior like that of a high-end luxury sedan. Only this one includes a dropped aisle, cold refreshment storage, executive tables, toilet, reclining seats and a long list of other welcome features that are all standard. With fore and aft external baggage compartments, passengers won't have to share their space with bulky gear. And with no props beating outside, that space is library quiet and vibration-free. Never has so much jet been so affordable. The Mustang achieves an ideal balance of speed, range and short-field performance.
